EC.3: The accession numbers and sequences of the 3,279 Hydrolases sub-enzyme family classified into 5 sub enzyme families: (EC.3.1) Acting on ester bonds; (EC.3.2) Glycosylases; (EC.3.4) Acting on peptide bonds (peptide hydrolases); (EC.3.5) Acting on carbon-nitrogen bonds, other than peptide bonds; (EC.3.6) Acting on acid anhydrides. No pair of proteins in the above 5 sub enzyme families has more than 40% sequence identity. See the text of the paper for further explanation.

(EC.3.1) 1228 “Acting on ester bonds” proteins

EC.4: The accession numbers and sequences of the 892 Lyases sub-enzyme family classified into 6 sub enzyme families: (EC.4.1) Carbon-carbon lyases; (EC.4.2) Carbon-oxygen lyases ; (EC.4.3) Carbon-nitrogen lyases ; (EC.4.4) Carbon-sulfur lyases ; (EC.4.6) Phosphorus-oxygen lyases ; (EC.4.99) Other lyases. No pair of proteins in the above 6 sub enzyme families has more than 40% sequence identity. See the text of the paper for further explanation.

(EC.4.1) 340 “Carbon-carbon lyases” proteins
