

Online Supporting Information B: The accession numbers and sequences of 18 sub-enzyme classes of EC.1(Oxidoreductases), 8 sub-enzyme classes of EC.2(Transferases), 5 sub-enzyme classes of EC.3(Hydrolases), 6 sub-enzyme classes of EC.4(Lyases), 6 sub-enzyme classes of EC.5(Isomerases), 6 sub-enzyme classes of EC.6(Ligases).

EC.1: The accession numbers and sequences of the 1,820 Oxidoreductases sub-enzyme family classified into 18 sub enzyme families: (EC.1.1) Acting on the CH-OH group of donors; (EC.1.2) Acting on the aldehyde or oxo group of donors; (EC.1.3) Acting on the CH-CH group of donors; (EC.1.4) Acting on the CH-NH(2) group of donors; (EC.1.5) Acting on the CH-NH group of donors; (EC.1.6) Acting on NADH or NADPH; (EC.1.7) Acting on other nitrogenous compounds as donors; (EC.1.8) Acting on a sulfur group of donors; (EC.1.9) Acting on a heme group of donors; (EC.1.10) Acting on diphenols and related substances as donors; (EC.1.11) Acting on a peroxide as acceptor (peroxidases); (EC.1.12) Acting on hydrogen as donor; (EC.1.13) Acting on single donors with incorporation of molecular oxygen; (EC.1.14) Acting on paired donors, with incorporation or reduction of molecular oxygen; (EC.1.15) Acting on superoxide as acceptor; (EC.1.16) Oxidizing metal ions; (EC.1.17) Acting on CH or CH(2) groups; (EC.1.18) Acting on iron-sulfur proteins as donors. No pair of proteins in the above 18 sub enzyme families has more than 40% sequence identity. See the text of the paper for further explanation.

(EC.1.1) 449 “Acting on the CH-OH group of donors” proteins

EC.2: The accession numbers and sequences of the 2,847 Transferases sub-enzyme family classified into 8 sub enzyme families: (EC.2.1) Transferring one-carbon groups; (EC.2.2) Transferring aldehyde or ketone residues; (EC.2.3) Acyltransferases; (EC.2.4) Glycosyltransferases; (EC.2.5) Transferring alkyl or aryl groups, other than methyl groups; (EC.2.6) Transferring nitrogenous groups; (EC.2.7) Transferring phosphorous-containing groups; (EC.2.8) Transferring sulfur-containing groups. No pair of proteins in the above 8 sub enzyme families has more than 40% sequence identity. See the text of the paper for further explanation.

(EC.2.1) 529 “Transferring one-carbon groups” proteins
